

Everything's possible

After several years of suffering, Ricardo and Maria Augusta face the present and the future with a new smile full of hope and happiness.
See how MALO CLINIC changed their lives ...

Ricardo Ferreira, 40 years old, began to lose teeth and to wear prosthesis still in adolescence. The shame and low self-esteem made it impossible for him to smile and be more communicative, fact that made it very difficult to find a job.

Maria Augusta, 46 years old, a native from a village near Ponte de Lima, never had the economic conditions to tackle the problem and had been losing teeth over the years. Looking at the mirror was painful. The few economic resources at her disposal were always aimed at caring for her children.
