

Everything's possible

Together with FOR (Foundation for Oral Rehabilitation), MALO CLINIC continues to change lives and to distribute happiness, giving a new smile to people like Susana, who was not able to overcome the serious dental problems that prevented her from having in her face the smile she dreamed and deserved due to numerous difficulties. This is her story...

Susana Pereira is 39 years old. Single, she lives with her four children, her son-in-law, her granddaughter and a brother. Her dental problems started when she was around 14 and worsened when she had a lung surgery, two years later. Her teeth got weaker and she had to pull them off. She was a very smiling and playful person but, out of shame due to her dental problems, she gradually stopped talking with a lot of people. She has already had dental implants placed before, paid for by an old boss of hers, but they were not correctly placed and she was forced to use a removable prosthesis that was broken and misfit. Now, thanks to MALO CLINIC, she feels her life has changed. She is happy to be able to eat better, she says she will talk to everyone again and she is delighted that her children can now see her "a much more beautiful woman".
